DETAILED ACTION

Election/Restrictions

The inventions are distinct, each from the other because of the following reasons:

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group 1, claim(s) 20, 21 and 31-32, drawn to a pad printing press with a rotary indexing table that has a cam for actuating movement of a slide.

Group 2, claim(s) 20 and 22, drawn to a pad printing press with a slide that is rigidly coupled to a rotary indexing table in the direction of rotation.

Group 3, claim(s) 20 and 23-26, drawn to a pad printing press characterized in that a pad drive independent of the rotary indexing table is provided.

Group 4, claim(s) 20 and 27-29, drawn to a pad printing press characterized in that a slide has a longitudinal guide for a guide rod of the pad.

Group 5, claim(s) 20 and 30, drawn to a printing press characterized in that the slide with the inking device and pad can be excused as a module.

Group 6, claim(s) 20 and 33-34, drawn to a printing press characterized in that the press is a multicolor printing press.

Group 7, claim(s) 20 and 35, drawn to a pad printing press characterized in that an inking station, an ink collection station, an ink transfer station and a cleaning station are provided for the pad..

Group 8, claim(s) 20 and 36-37, drawn to a pad printing press characterized in that the distance covered by the pad is adjustable.

Group 9, claim(s) 20 and 38, drawn to a pad printing press characterized in that the rotary indexing table is reversible drivable.

Art Unit: 2854

It also appears that claim 32 should be amended to depend upon claim 31 as opposed to claim 21, as it invokes the epsilon shaped section that has no antecedent basis is claim 21, but instead is discussed in dependent claim 31.

2. Inventions of Groups 1-9 are directed to related products. The related inventions are distinct if: (1) the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect; (2) the inventions do not overlap in scope, i.e., are mutually exclusive; and (3) the inventions as claimed are not obvious variants. See MPEP § 806.05(j). In the instant case, the inventions as claimed are not obvious variants. Furthermore, the inventions as claimed do not encompass overlapping subject matter and there is nothing of record to show them to be obvious variants.

3. Claim 20 link(s) inventions of Groups 1-9. The restriction requirement over the linked inventions is **subject to** the nonallowance of the linking claim(s), claim 20. Upon the indication of allowability of the linking claim(s), the restriction requirement as to the linked inventions **shall** be withdrawn and any claim(s) depending from or otherwise requiring all the limitations of the allowable linking claim(s) will be rejoined and fully examined for patentability in accordance with 37 CFR 1.104 **Claims that require all the limitations of an allowable linking claim** will be entered as a matter of right if the amendment is presented prior to final rejection or allowance, whichever is earlier. Amendments submitted after final rejection are governed by 37 CFR 1.116; amendments submitted after allowance are governed by 37 CFR 1.312.

Applicant(s) are advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, the allowable linking claim,

Art Unit: 2854

such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Where a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. *In re Ziegler*, 443 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

It is believed that Wang Man (GB 2,305,633) included with this restriction discloses all of the technical features claimed in linking claim 20. Wang Man teaches a pad printing press **2** comprising a rotary indexing table **20** with two plates **4** having inking devices **16** and **18** arranged on plates movable in a radial direction on the plate (see Figure 6B) between a rest position and an inking position. It teaches a pad **10** movable in the vertical direction (**24** adjusts the high of the apparatus) characterized in that the pad and the inking device are fastened to a radially movable slide **8** and **22**.

4. A telephone call was not made as the applicant and attorney both have foreign phone numbers and an election via telephone does not appear to be likely.
